

Demonstration of Proposed Features

Date	29 September 2026
Team ID	SWTID-2026-1876
Project Name	AI BlogNest API
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures the proposed features of the AI BlogNest API project and records whether each feature was successfully implemented and demonstrated. The project provides a structured backend API for blog management with secure authentication, MongoDB database integration, and AI-powered blog generation and summarization using Google Gemini AI.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	User Authentication	User registration and login with password hashing using bcrypt and JWT-based authentication.	Implemented	Yes	Registration, login and protected API access are supported.
2	Blog Management	Create, view, update and delete blog posts using REST APIs and MongoDB.	Implemented	Yes	Blog management APIs are implemented and tested.
3	AI Blog Generation	Generate blog content from topic and category information using Google Gemini AI.	Implemented	Yes	AI-generated blog content is returned through the API.
4	AI Blog Summarization	Generate a short and meaningful summary from existing blog content using Gemini AI.	Implemented	Yes	Existing blog content can be summarized through the API.
5	Database Integration	Store and retrieve user and blog information using MongoDB with Mongoose models.	Implemented	Yes	User and Blog models are integrated with MongoDB.
6	API Testing & Error Handling	Test REST APIs using Thunder Client with centralized error handling middleware.	Implemented	Yes	API requests and responses are verified using Thunder Client.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
